

WE'RE HIRING

engineering students

catena consulting engineers • Portland, OR

We're looking for:

- aspiring structural engineers from **Cal Poly's Civil & Environmental Engineering Program** for summer internships
- motivated individuals who desire to learn, grow, be challenged, and contribute to our high-performing team's continued success
- 4th-year undergraduate students or later with an intent to focus on structural engineering

We offer:

- competitive compensation
- the personal environment of a small firm with the opportunity to work on a variety of projects, big and small, with all types of structural materials
- an atmosphere that fosters teamwork, impromptu learning sessions, direct access to firm leadership, and optimum communication

"The diversity of the projects we were assigned to is what makes working at catena fun and challenging. Some projects involved topics from our statics class from sophomore year while others involved challenging concepts from graduate classes in structural engineering – some of which we have no experience in yet."

-Damian Andreani
(former intern, now full-time engineer)

Candidates must be authorized to work in the U.S. without the need for sponsorship now or in the future. Catena is an Equal Opportunity Employer/Affirmative Action Employer and participates in the E-Verify Program.
